

## Cleaning RotoBed®Home in a washing system

RotoBed®Home is approved according to the norm IPX6W (Water rating) and washable in a washing system. Follow the instructions carefully to avoid damaging the bed:

- Unplug the power plug. Remove all fabrics (including mattress and covers) as well as all parts of wood.
- All plug connections must be sealed with a plug cover.
- All plugs and plug covers must be fitted with locking-rings to prevent water from entering the engines.
- Drive all engines fully down/in (so no engine arms protrude) to prevent lime scale and rust formation.
- The electrical parts and mechanical functions of the bed must be tested before using the bed again.

RotoBed® points out that washing in machines will cause the bed to age faster over time.
